

Tackling Challenges, Improving Lives

July 2010

Patricia B. Gurin
Chair, Board of Directors

AIR's experts have tackled some of the toughest behavioral and scientific challenges facing societies, in both the United States and the developing world.

Our work has confronted a host of pressing social concerns, from the growing problem of medical errors in the nation's hospitals to curing students in the impoverished world of parasitic infections, from addressing the violence and obstreperous behavior plaguing urban schools to devising a benchmark for comparing the performance of U.S. students with their counterparts internationally. In each of these examples – and many more that are cited in this report – AIR's experts have made significant progress in identifying the underlying dynamics of problems being experienced in education, health care and the workplace. Such progress has led not only to implementing practical solutions, but also to their application globally.

From teachers and school administrators to health care providers and patients, those on the front lines now have a better understanding of how to deal with the challenges they face, thanks to AIR's efforts. Indeed, the significance of this work is evident in how much it is valued by those for whom we have performed our studies, by Congress and state legislatures, and by leading professional organizations that have once again honored AIR's experts with some of their more prestigious awards.

Most importantly, the work of our technical support and research teams has improved people's lives, many of them children, the ill and the dispossessed. These results reaffirm our conviction that AIR employs the most purposeful expertise in human and social research.

That we have achieved extraordinary results in helping to solve social and behavioral problems domestically is satisfying in itself. That we continue to expand the reach of our work to societies across the globe is a source of added pride.

We welcome the challenge.
