

Florida Network for School Improvement

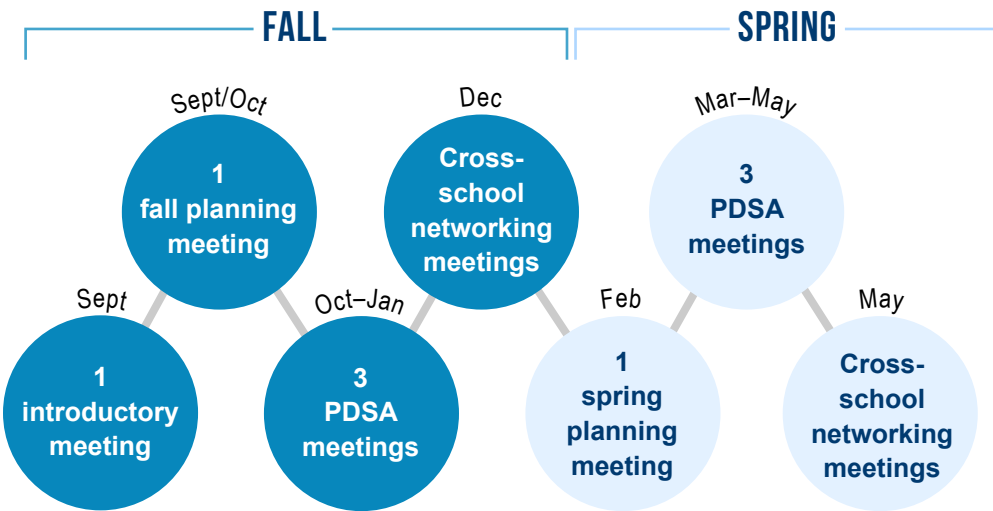

In 2019 AIR, with funding from the Bill and Melinda Gates Foundation, launched FNSI. FNSI is a network of high school teachers dedicated to continuously improving math instruction and increasing the percentage of students who pass Algebra I and Geometry end-of-course exams by the end of 10th grade.

2020–2021 school year data

FNSI began with teachers from 10 high schools in the School District of Osceola County and in future years, will expand to include additional schools in Florida.

“ I loved having our team at school work on the same problems and share our data. Seeing the results of other teachers encouraged my continuing improvement.” — FNSI High School Geometry Teacher

In 2020-2021, teachers tested change ideas that could work in both virtual and face-to-face instruction in response to COVID-19.

68% of teachers completed six or more PDSA trials over the course of the school year.

77% of teachers agreed they learned how to use improvement tools and methods.

77% of teachers agreed they better understood and improved their own work.

75% of teachers agreed they got access to new ideas from others in the network.

PDSA Work in Action

Teachers work together to identify, test, and refine instructional routines designed to improve math proficiency.

* Total for 9th and 10th grades combined.
