‘Clustering’ Teach for America Instructors Leads to Math Gains in Miami

A strategy to “cluster” Teach for America corps members in some of Miami’s highest-need schools led to large gains in student math achievement, but had little impact on reading skills, finds a new AIR study. Researchers also looked at the influence—or spillover effect—of TFA’s instructors on fellow teachers and found no significant difference in their overall performance. This study is the first to look at the program’s impact beyond the classrooms of individual TFA members.

Women, Blacks Most Likely to Leave STEM Careers

One in six who earns a Ph.D. in STEM (science, technology, engineering and mathematics) pursues a career outside the field, with women and blacks most likely to do so, according to the latest research brief from AIR’s Broadening Participation in STEM series. The analysis also looks at what general career paths and work these Ph.D. holders take up after leaving their discipline and finds that nearly 40 percent end up doing work unrelated to their field in the private, for-profit sector.

What are the Challenges of Locating Longitudinal Study Participants?

Since many longitudinal and follow-up studies face the common challenge of locating participants, experts from AIR’s Project Talent examined the extent to which a widely dispersed population can be located again after decades without contact. Women were found at significantly lower rates than men and those with lower cognitive abilities numbered among the hardest to reach. These and other findings were recently published in the Journal of Official Statistics.

New Brief Gives Tips on How to Measure College Grads’ Economic Success

As national and state policymakers try to figure out how to measure college graduates’
IN BRIEF
Dan Goldhaber joins AIR as vice president and director of the National Center for the Analysis of Longitudinal Data in Education Research (CALDER).

Reports of College Campus Sex Crimes Increased 52%

AIR Helps Produce Special Issue of America’s Young Adults

America’s young adults are more racially and ethnically diverse, more likely to graduate from high school and attend college, and less likely to smoke than previous generations, according to a new report AIR helped produce with the Federal Interagency Forum on Child and Family Statistics. America’s Young Adults: Special Issue, 2014 focuses on education, economic circumstances, family formation, civic, social and personal behavior, and health and safety.

economic success, a new brief from the Education Policy Center at AIR provides suggestions based on its previous analyses of states’ employment data. Measuring the Economic Success of College Graduates: Lessons from the Field explains why reporting a student’s loan debt upon graduation is so important and how to capture data on grads employed out of state.
