Do Afterschool Programs Contribute to Social and Emotional Development?

The short answer is yes, they do, for youth who participate regularly in high-quality programs. The caveat is that evidence is somewhat limited. Relatively few studies have rigorously examined the impact of afterschool programs on social and emotional competencies. In 2007, Durlak and Weissberg released their seminal meta-analysis that examined the connection between developing personal and social skills in afterschool settings and a range of outcomes, including academic achievement. They found that afterschool programs employing what they dubbed the S.A.F.E. features (sequenced, active, focused, and explicit) had significant benefits for youth on a wide range of outcomes, including feelings of self-confidence and self-esteem, school bonding, and positive social behaviors.

Since that report, only a handful of researchers have explored the connection between participation in afterschool programs and social and emotional outcomes. Those few studies have shown that participation in programs is associated with improved social and behavioral outcomes, including gains in peer-to-peer social skills, prosocial behavior, engagement, intrinsic motivation and effort, and positive states of mind.

All of these studies have shown that quality of programming and level of participation matter for producing outcomes for youth. In programs that were high quality, young people were more likely to see positive outcomes. Likewise, youth who participated at high levels were more likely to experience changes than those who participated at low levels.

Where Do Practitioners and Researchers Go From Here?

The research clearly points to several key features of afterschool programs that contribute to improved social and emotional outcomes. Given those, we recommend that practitioners engage in the following:

- Provide professional development for staff on how to make program activities S.A.F.E.
- Participate in existing quality improvement activities or advocate for additional funding related to quality improvement—and then use that funding to create strong quality assessment and improvement practices.

- Conduct regular youth satisfaction surveys to gauge how engaged youth feel in the program. If engagement is low, implement strategies to foster a sense of belonging and fun in the program.

- Bolster youth participation by identifying what youth like and do not like about the program and making changes to match their needs and interests.

- Identify which skills the program targets. Make choices. Think about program activities. Decide on what few key social and emotional competencies the program truly targets and measure those—not the universe of social and emotional skills that exist.

We see three key next steps for the research community to move the field forward:

1. **Collect new, current evidence.** The limited number of recent studies focused explicitly on how afterschool programs improve social and emotional skills suggest a need for a study that measures impact over the past decade, with a particular focus on how higher quality programs are contributing to social and emotional competencies.

2. **Improve the tools for measuring competencies.** There is also a need for stronger validated measures of social and emotional skills and clear guidance on how to use them. Although several tools are available for use in school-based settings, very few exist that are explicitly designed and are appropriate for use in afterschool settings.

3. **Help afterschool programs better use the data they collect.** The field would benefit from a guide that outlines what programs should do once they have selected a measure—how to identify the skills the program actually targets and select an appropriate measure, accurately collect data on those skills, and report out on the data in a clear and responsible way.
